TiNoI-TQTM Pre Torqued Nitinol

TiNoI-TQTM nitinol wires provide **ideal most physiological torque force** compared to stiff SS wires. No need to worry about discomfort and pain to your patient.

TiNoI-TQTM wires **provide early application of torque to anteriors** where needed. So that the total treatment time is reduced specially in extraction cases with steep inter-incisal angle at the beginning of treatment.

TiNoI-TQTM nitinol wires have standard **20° of torque built** into the anterior region of each wire. Wire can be removed as soon as the required torque is achieved.

Torque force can be applied **labially or lingually** by reversing the orientation of the wire.
